

# COLUMN SHUTTERING LINE

## LIGHT LINE

This kind of light formwork is perfect for column construction, with square or rectangle shape that requires manual handle (30x50 weight plate is 46 kg). Its special design makes possible the assembly with a small amount of accessories reducing the operators number to perform the placement to only two workers.

Produced with high resistance materials that provide large placement diversity and uses, the maintenance required is almost none; it only needs an easy cleaning before using it again.

The closing system by bolt and wedge, welded to the plate by a small chain allowing the fastening with a single position.

It is possible to carry out pillars from 25 cm to 45 cm (always multiple of 5 sizes).

For example: 25x25, 45x45, 25x35, 30x40, 35x45, etc.

There are different accessories from the plastic stoppers for blocking the holes to the joint clamp for joining the plates together vertically.

We can develop and manufacture upon request different non-standard sizes for fitting bigger columns.

STANDARD SIZES	SPECIAL SIZES
300 x 50	300 x 30
270 x 50	300 x 40
260 x 50	300 x 60
250 x 50	300 x 70
125 x 50
