

CONSTRUCTION EQUIPMENT

UNLOADING PLATFORM

Maquiobras metallic platform eases the construction materials unloading at each floor of the building. It is recommended as a crane complement.

Easy to install by the same crane used in the construction it only requires six props between the floor and the ceiling to be placed in each floor.

It doesn't need any maintenance and its storage is very simple as they can be piled up.

There are two models available: a fixed platform and a platform with a folding trap door, which permits the way to the crane cable (the one which the construction materials are moved).

We recommend that the trap door remains always open.

TECHNICAL DATA

Maximum load	1.500 kg
Material Maximum speed	0,20 m/s
Safety rate	1,20
Useful inside size	180 cm x 156 cm
Space for props	10 cm
Prop number	6
Fixed platform weight	203 kg
Trap door platform weight	226 kg
